

Abstract of the Disclosure

[0068] Client-side modification of electronic documents by server-generated instructions in a client-server environment enables dynamic modification of formatting information in an electronic document to accommodate new data received from the server. A server generates machine instructions to send to a client along with new data for an electronic document. The generated instructions modify the electronic document at the client to accommodate the new data. The generated instructions may include at least one tag indicating a relative order in which the new data is to be imported into the electronic document and the instructions are to be performed.
